SUMMARY

SDET with ~4 years building test automation for data-intensive production systems at **TransUnion CIBIL** - a 900M+ record platform processing **70M** records daily. **Functional QA lead** across ingestion, correction, and downstream pipeline workstreams - own release scoping, test strategy, and onboarding for a 3-member team covering **2000+** test cases. Build Playwright + pytest frameworks, Python automation tooling, and adopt AI-augmented SDET workflows; engage shift-left from design review onward.

PROFESSIONAL EXPERIENCE

Engineer | TransUnion CIBIL

March 2025 - Present

- Built **Playwright + pytest** framework for Global Data Corrections Portal - parameterized Python suite across **8 bulk correction workflows** processing **~300,000 consumer records daily**, with maker/checker authorization, ticket lifecycle tracking, and downstream pipeline validation; cut **30 min** manual regression to **one parameterized run** per file.
- Led production incident response for payment data corruption affecting **400,000 consumer records** - analyzed audit logs, designed **100 targeted test cases** validating the fix, restored production in **5 days with zero post-release defects**.
- Engineered **Python automation tooling** replacing manual workflows - bulk **REST API** execution (replaced SoapUI), SQL-based **PostgreSQL** validation via pgAdmin, and test data generation; cut regression effort from **1-2 days to under 1 hour** across **500+ manual executions**.
- Architected hybrid **REST API + Playwright E2E** framework (requests + pytest) - 50 tests validating data consistency between API and UI layers, including UI-state preservation when downstream APIs fail, catching **sync defects missed by API-only tests**.
- Integrated **AI/LLM tooling** into SDET workflow for BRD-to-test-case derivation, Playwright/pytest scaffold generation, and failure log triage - applied across **4 Agile delivery cycles** at TransUnion.
- Authored sprint-level **test plans** and **defect reports** in JIRA across 15+ releases; **mentored** junior QA engineers on Playwright framework adoption and automation best practices.

Associate Engineer | TransUnion CIBIL

July 2022 - March 2025

- Validated **Informix-to-PostgreSQL** data migration across consumer credit records (demographics, accounts, payments) - executed **6 pre-prod regression cycles** covering **~600M consumer records**, enabling a **700M-record production migration** in **~2 days with zero rollback**.
- Diagnosed serial-number duplication incident impacting **~2,000 consumer records/day** - extrapolated **55 test cases** from production log samples; fix shipped in **1.5 months**.
- Security-tested** Java-based **PII encryption** (name, ID, phone, address) of consumer records for **RBI compliance** pre-production.
- Designed **~150 test cases** for a monthly-to-daily ingestion frequency upgrade of consumer account history - covering **same-day deduplication**, data continuity during record merges, and retention boundary behavior.
- Tested **Ab Initio ETL** transformations and Unix pipeline outputs across **15+ production releases** handling **~70M consumer records/day** across a **900M+ consumer database**.

EDUCATION

B.Tech - Computer Science | KIIT University, 2022 | CGPA: 9.16

PROJECTS

Fintech Payment API Test Suite | Python · pytest · requests · PostgreSQL

🌐 GitHub

- 61 pytest tests** across unit, integration, and E2E layers for REST API payment flows - initiation, status validation, refund, and error handling; **unittest.mock** patches external payment processor for deterministic runs.
- confest.py** fixtures for environment-agnostic config and PostgreSQL-backed test data isolation.

E-commerce UI Test Framework | Python · Playwright · pytest · POM

🌐 GitHub

- 45 Playwright tests** with **Page Object Model** - parallel execution via pytest-xdist, trace viewer on failure, and deterministic test isolation via unittest.mock for external dependencies.
- GitHub Actions CI** pipeline on every PR; Allure reporting for visual debugging.

SKILLS

Languages: Python · SQL · C++

Test Automation: Playwright (Python) · pytest · POM · REST API validation · JSON · XML · requests · Postman · SoapUI · Cucumber · BDD · Gherkin · STLC · SDLC · Agile/Scrum · Functional testing

Platforms & Tools: Ab Initio (Control Center, GDE) · PostgreSQL · Unix · Linux · Git · GitHub Actions · Jenkins · AWS basics · JIRA · Confluence
